## Concentrated Oral Electrolyte Solution for Horses

### VETSENSE REHYDRATE

- ✓ Restores electrolyte balance immediately after exercise. No need to wait until the next feed.
- ✓ Stimulates thirst in the horse thus encouraging drinking of water.

- ✓ Easy to use 1 Litre packs with measuring chamber to administer at shows or on the road.
- ✓ Caramel flavoured - mix with water or give undiluted over the back of the tongue.
- ✓ Contains glucose for energy.

### COMPOSITION

Each litre contains (as ions)  
Chloride 63.96 g, Potassium 30.36 g,  
Sodium 40.45 g, Phosphate 23.17 g,  
Sulphate 11.59 g, Magnesium 2.93 g,  
Glucose 260.0 g.

### DIRECTIONS FOR USE

Always make available a plentiful supply of clean fresh drinking water following consumption of Vetsense Rehydrate.

The concentrate can be administered by oral syringe over the back of the tongue, with immediate access to clean, fresh drinking water, or can be diluted with clean fresh water.

### ORAL SYRINGE OVER THE TONGUE

Horses 450 to 500kg  
Light work: 40mL  
Moderate work: 60mL  
Heavy work: 80mL  
Endurance/eventing,  
heavy sweat loss, dehydration: 80mL  
Ponies <350kg  
Half of the above doses

### DILUTED SOLUTION

Horses 450 to 500kg  
Light work: 40mL in 2L of water  
Moderate work: 60mL in 3L of water  
Heavy work: 80mL in 4L of water  
Endurance/eventing,  
heavy sweat loss,  
dehydration: 80mL in 4L of water  
Ponies <350kg  
Half of the above doses

### SPECIAL DOSE RATES

Severely dehydrated horses: 6 to 8L of diluted solution (40mL REHYDRATE per litre of water). Endurance exercise: 60 to 80mL by oral syringe over the tongue, immediately followed by water.

Travelling horses: 40 to 60mL over the tongue with water in hot weather or long distances, 30 to 60 minutes before travelling. Repeat every 2 hours, and again on arrival. The use of this product prior to racing will not elevate plasma bicarbonate levels and therefore will not contravene the rules of racing.

### PRESENTATION

1 Litre chamber measure pack and  
5 Litre jerry can.
