

GASTROSYL

BISMUTH SALICYLATE ORAL SUSPENSION

Vetsense Gastrosyl is an aid for gastroenteritis and diarrhoea in horses and dogs that quickly helps relieve most digestive disturbances caused by dietary or stress factors. By addressing several symptoms and underlying issues, Gastrosyl helps in several ways:

- ✓ **Reduces Inflammation:** Salicylate is a fast acting anti-inflammatory that provides pain relief and ease discomfort.
- ✓ **First-line Treatment:** A non-antibiotic treatment option that will not disrupt the gut microbiome. Can also be used alongside antibiotics if indicated.
- ✓ **Protects the Gut:** Bismuth lines and protects the mucosal surfaces, reducing irritation and allowing the gut to heal.
- ✓ **Treats Diarrhoea:** Gastrosyl can help reduce diarrhoea and firm up stools.
- ✓ **Absorbs Toxins:** Gastrosyl helps absorb harmful substances in the gut, which can reduce diarrhoea caused by toxins.
- ✓ **HORSES:**
 - Used for treating diarrhoea, which can occur due to stress, dietary changes or bacterial infections.
 - Helps with managing the symptoms and preventing further gastrointestinal tract irritation.
- ✓ **DOGS:**
 - Also used for treating diarrhoea, especially when the cause is unclear, or there is concern about inflammation or infection.
 - Can help relieve symptoms and provide comfort while the underlying issue is treated or resolves.

GENERAL DIRECTIONS

The regulations of the relevant authorities regarding medication should be observed if used in performance animals.

WITHOLDING PERIODS
MEAT (HORSES): 28 DAYS

PRECAUTIONS

Use with caution in pregnant animals as the safety in pregnant animals has not been established.
